Albert Osiński : BM-13N Katyusha: On ZIS-6 (TopShots) before purchasing it in order to gauge whether or not it would be worth my time, and all praised BM-13N Katyusha: On ZIS-6 (TopShots):

• Includes free decals and masking foil • Packed with color photos Katyusha multiple rocket launchers are a type of rocket artillery first built and fielded by the Soviet Union in World War II. Compared to other artillery, these multiple rocket launchers deliver a devastating amount of explosives to an area target quickly, but with lower accuracy and requiring a longer time to reload. They are fragile compared to artillery guns, but inexpensive and easy to produce. Katyushas of World War II, the first self-propelled artillery mass-produced by the Soviet Union, were usually mounted on trucks. This mobility gave them another advantage: being able to deliver a large blow all at once, and then move before being located and attacked with counter-battery fire. Katyusha weapons of World War II included the BM-13 launcher, light BM-8, and heavy BM-31. Today, the nickname is also applied to newer truck-mounted Soviet multiple rocket launchers—notably the common BM-21—and derivatives. This pictorial album of detailed photographs provide a great resource for the modeler and enthusiast. About the Series This is a classic series of highly illustrated books on the best machines of war, with several hundred photographs of each aircraft or vehicle. With close-up views of the key features of each machine, including its variations, markings and modifications, customizing and creating a model has

never been easier. Includes extra features such as decals and masking foil.
