**Christopher Barrow : The Pocket Watch: Restoration, Maintenance and Repair** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Pocket Watch: Restoration, Maintenance and Repair:

7 of 7 people found the following review helpful. Better than expected from other reviews By JonWI bought this book before I had seen the AHS review. Had I seen it, I probably would not have bought the book. I agree with their

reviewers concern about about the restoration methods the book suggests. I believe the book still has real value if you expect to work on English watches. The value is in the take down photographs. It is the only reference I know which has detailed take down photos so you know what you are getting into. The book may have additional value in showing what it recommends and learning to identify his techniques to avoid buying such "restorations". The book is very reasonably priced. Within its limits it is well worth its cost. 0 of 0 people found the following review helpful. It's a good book don't get me wrong but he keeps repeating ...By Anthony M. It's a good book don't get me wrong but he keeps repeating himself. this book could be only 10 pages and it would have the same ending from 150 pages ago. anyway its good for the first chapter you don't have to read anymore it's all the same after that. 0 of 0 people found the following review helpful. The Pocket Watch By John Ohannesian This book is very complete and well written. It really goes into detail about watch repair and maintenance. Great illustrations, too.

Using as examples six of the most typical types of watch from a period spanning the late 18th century to the early 20th century, the author takes the intelligent enthusiast through the cleaning and repair process, step by careful step, using photographs of excellent clarity, and in lucid language, characterized by his own friendly and helpful tone. He aims to equip the reader with a sound basic knowledge not just of the process but also all the tools and materials as well as their sources.

About the Author A member of the British Horological Society, Chris Barrow has been an electronic design engineer for almost 30 years. He has been cleaning and repairing pocket watches for 20 years.
